

FAQs for Template Code Implementation

1. Run backend service error in SAP BTP cockpit

Please double check that you have correctly specified the name of the Destination Service and the GTT Base URL.

The screenshot displays the SAP BTP cockpit interface for managing destinations. At the top, there is a navigation bar with links: 'New Destination', 'Import Destination', 'Certificates', 'Download Trust', and 'Renew Trust'. Below this is a table listing existing destinations. Two destinations are shown, both of type 'HTTP':

Type	Name	Basic Properties	Actions
HTTP	gtt_pof_forwarding-acc	Authentication: OAuth2ClientCredentials ProxyType: Internet URL: https://gtt-sample-track-purchaseorders-service-acc.cfapps.sap.hana.o...	[Edit] [Clone] [Export] [Delete]
HTTP	gtt_pof_forwarding-int	Authentication: OAuth2ClientCredentials ProxyType: Internet URL: https://gtt-sample-track-purchaseorders-service-int.cfapps.sap.hana.on...	[Edit] [Clone] [Export] [Delete]

Below the table is the 'Destination Configuration' form for the selected destination 'gtt_pof_forwarding-acc'. The 'Name' field is highlighted with a red box and contains the text 'gtt_pof_forwarding-acc'. Other fields include 'Type' (HTTP), 'Description' (empty), 'URL' (https://gtt-sample-track-purchaseorders-s...), 'Proxy Type' (Internet), 'Authentication' (OAuth2ClientCredentials), 'Client ID' (sb-itt_sof_acc112255), 'Client Secret' (masked with dots), 'Token Service URL' (https://lbn-gtt-samples.authentication.sap...), 'Token Service User' (empty), and 'Token Service Password' (empty). On the right, under 'Additional Properties', there is a checkbox 'Use default JDK truststore' which is checked. At the bottom of the form are buttons: 'Edit', 'Clone', 'Export', 'Delete', and 'Check Connection'.

The screenshot displays the SAP BTP cockpit interface for managing destinations. At the top, there is a navigation bar with links: 'New Destination', 'Import Destination', 'Certificates', 'Download Trust', and 'Renew Trust'. Below this is a table listing existing destinations. One destination is shown, of type 'HTTP':

Type	Name	Basic Properties	Actions
HTTP	gtt_core_engine_fip_base_url-acc	Authentication: BasicAuthentication ProxyType: Internet URL: https://lbn-gtt-samples.gtt-fip-lbnplatform-acc.cfapps.sap.hana.ondem...	[Edit] [Clone] [Export] [Delete]

Below the table is the 'Destination Configuration' form for the selected destination 'gtt_core_engine_fip_base_url-acc'. The 'Name' field is highlighted with a red box and contains the text 'gtt_core_engine_fip_base_url-acc'. Other fields include 'Type' (HTTP), 'Description' (empty), 'URL' (https://lbn-gtt-samples.gtt-fip-lbnplatform-...), 'Proxy Type' (Internet), 'Authentication' (BasicAuthentication), 'User' (gtt_sof_tech02@163.com), and 'Password' (masked with dots). On the right, under 'Additional Properties', there is a checkbox 'Use default JDK truststore' which is checked. At the bottom of the form are buttons: 'Edit', 'Clone', 'Export', 'Delete', and 'Check Connection'.

2. Build UT failed

Please double check the following:

- Built the MTAR file using an English MS-Windows environment
- Used Node.js version v14.15.0 upwards
- Used JDK version 8
- Executed the command “mvn clean”

3. Command not found

Please double check all your tools are correctly installed. For more information, see “Download and Setup Tools” in the relevant Implementation Guide.

4. Map not shown without Here Map Key

To have the map view, log the incident with the URL of Fiori Launchpad of template apps in SAP BCP system under component “SCM-LBN-GTT-APP”. Then follow the SAP Note 1773689: <https://launchpad.support.sap.com/#/notes/0001773689> to add logon credentials to the secure area so that we can provide you with the key in a safe way. After you get the key, you can use it deploying the backend service.

For quick validation, you can also use the tile service of other map services.

5. Map not shown after maintaining Here Map key

Please configure Here Map key in the Backend repository as follows:

<https://github.com/SAP-samples/logistics-business-network-gtt-samples/blob/master/lbn-gtt-template-tpo/GTT-V2-Sample-TrackPurchaseOrders-Service/mta.yaml#L12>

6. After I deployed the second template app, the first one is missing.

If the FLP code is pulled before February 2021 release, then refer to the latest Implementation Guide to implement your FLP code.
