2.4.7 Maintain Roles and Users	27
2.4.8 Open <i>Track PO Fulfillment</i> Template App from SAP Fiori Launchpad	28
3. Implement ERP Extractor	29
4. Other Configuration.....	30
4.1 Obtain A Here Map License	30
4.2 Maintain Location Master	30
4.3 Maintain Data Contributors	31

Note

The SAP Cloud Platform brand is retired. For more information, see [A Robust Platform for RISE with SAP !\[\]\(529949c2c3dadbaa4e538e8c643454bc_img.jpg\)](#). Parts of this content were created before our branding changes related to SAP technology were announced in January 2021.

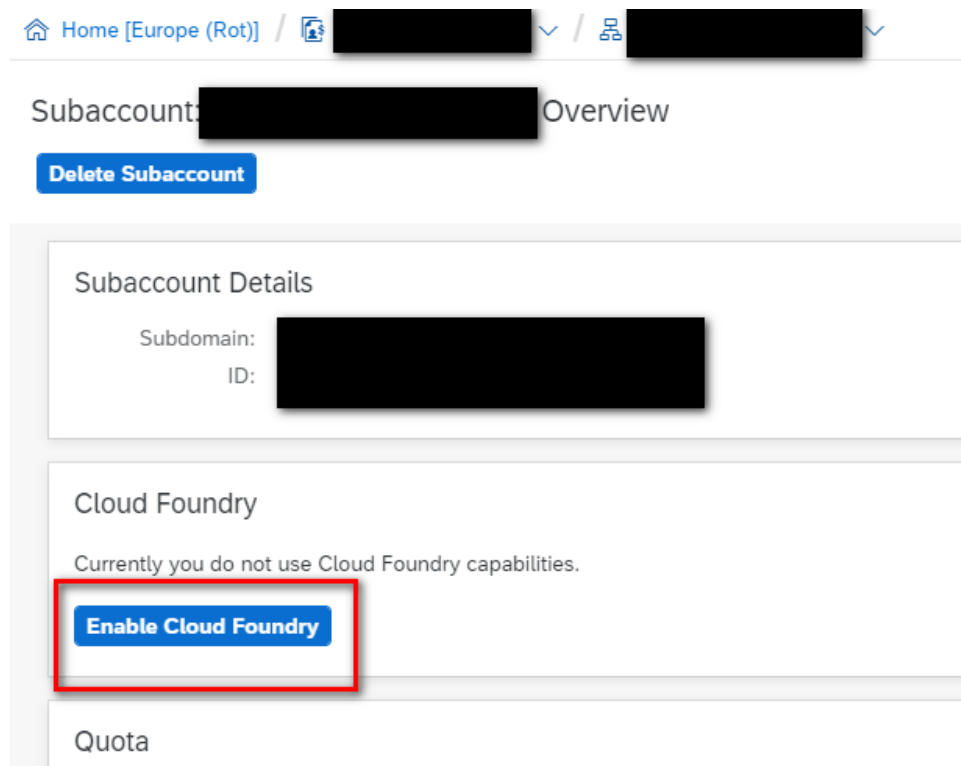

0.Prerequisites

- A SAP Business Technology Platform global account with entitlement to the global track and trace option for SAP Logistics Business Network, 1 portal service quota and 2 GB Application Runtime quota.
- To integrate the global track and trace option with ERP, your SAP ERP system should be running on Netweaver 7.31 or higher with SAP NOTE 2937175 being implemented. Besides, to implement the template apps' extractor codes, your SAP ERP system version should be S4 1909 SP03 on premise or higher.
- To integrate with visibility providers, log your incident in SAP BCP system with component 'SCM-LBN-GTT-COR'.

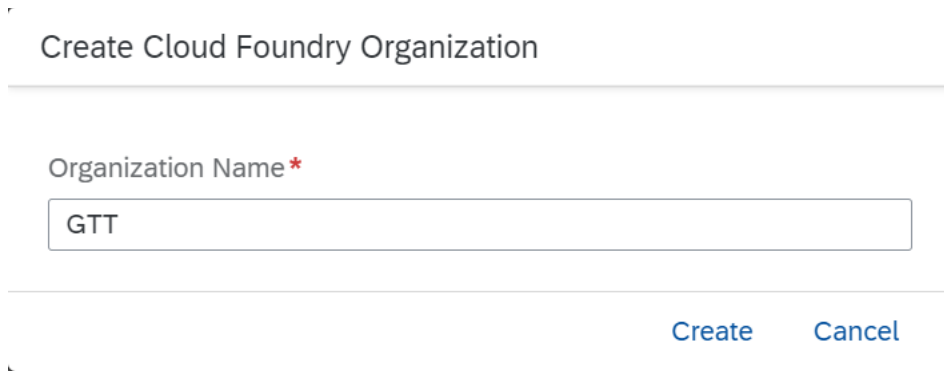

1.Environment Configuration in Logistics Business Network, Global Track and Trace Option

1.1 Enable Cloud Foundry and Create Space

1. Click 'Enable Cloud Foundry' to enable the development landscape

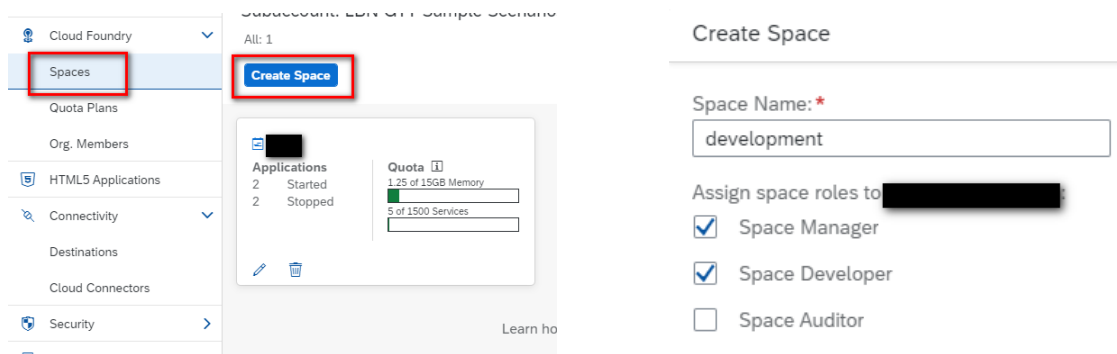

2. Fill in the Organization Name and click 'Create'

The screenshot shows a form titled "Create Cloud Foundry Organization". It has a text input field for "Organization Name" with a red asterisk indicating it is required. The field contains the text "GTT". At the bottom right of the form are two buttons: "Create" and "Cancel".

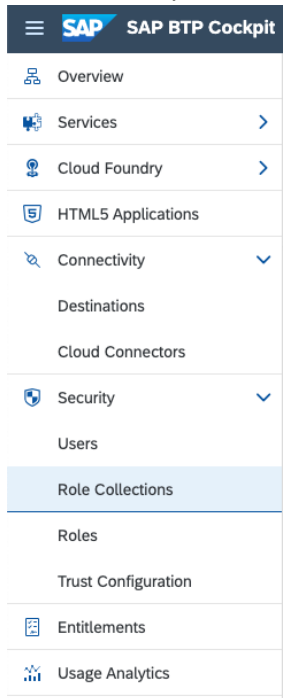

3. Go to 'Cloud Foundry' -> 'Spaces'
Click 'Create Space'
Fill in the Space Name and click 'Create'

The screenshot shows the Cloud Foundry console interface. On the left, a sidebar menu has "Spaces" highlighted with a red box. In the main area, a "Create Space" button is also highlighted with a red box. Below this, a summary card shows "Applications" (2 Started, 2 Stopped) and "Quota" (1.25 of 15GB Memory, 5 of 1500 Services). To the right, the "Create Space" form is shown. It has a "Space Name" field with a red asterisk, containing the text "development". Below this, under "Assign space roles to", there are three checkboxes: "Space Manager" (checked), "Space Developer" (checked), and "Space Auditor" (unchecked). A redacted area is visible next to the "Assign space roles to" label.

1.2 Maintain Roles and Users

1. Go to 'Security' -> 'Role Collections'

2. Create 2 role collections (You can have user-defined names):

gtt-sample-all

gtt-sample-integration

- Role template 'gtt-sample-all' is granted to users who have access to the global track and trace option and *Track PO Fulfillment* template app.
 - Role template 'gtt-sample-integration' is granted to technical users only who have access to the global track and trace APIs for development purpose.
3. Go to the role of 'gtt-sample-all', and add the following roles:

Role	Application
MessageLogAdminTemplate	lbn_gtt_core
DataModelAdminTemplate	lbn_gtt_core
LocationProcessTemplate	lbnplatform-loc-broker
BPEditTemplate	lbnplatform-bprepo
BusinessPartnerDiscoveryTemplate	lbnplatform-bprepo
InviteBPPProcessTemplate	lbnplatform-bprepo
ManageInvitationsProcessTemplate	lbnplatform-bprepo
BlockStoreProcessTemplate	lbn-retentionmanagement-sb

4. Grant 'gtt-sample-all' to your **application** users:

- Application users are those who have access to global track and trace option and *Track PO Fulfillment* template app.

IT Administrator needs to maintain application users in identity provider.

For example, user1@sap.com

Users (51)				
ID	Identity Provider	E-Mail	First Name	Last Name
[REDACTED]@sap.com	SAP ID Service	[REDACTED]@sap.com	[REDACTED]	[REDACTED]
[REDACTED]@sap.com	SAP ID Service	[REDACTED]@sap.com	[REDACTED]	[REDACTED]
[REDACTED]@sap.com	SAP ID Service	[REDACTED]@sap.com	[REDACTED]	[REDACTED]

Note: The application user in this step should be different from the technical user created in [Step 1.3](#).

1.3 Maintain Technical User

1. Go to the SAP Business Technology Platform to create the technical user account:

<https://account.hana.ondemand.com/#/home/welcome>

Click 'Register'

SAP Business Technology Platform

SAP BTP

SAP's open platform as a service for developing cloud business applications in a fully provisioned environment.

Using a set of end-to-end services, capabilities, and tools, developers can build, extend, and integrate business applications in the cloud.

[Read more on cloudplatform.sap.com](#)

SAP BTP Cockpit

The central Web-based user interface for administrators, providing access to a number of functions for configuring and managing applications and connecting them to services on SAP BTP.

Use the cockpit to manage resources, services, security, monitor application metrics, and perform actions on cloud applications.

[Sign In](#)
[Register](#)

2. Fill in the mandatory fields:

Tell us about yourself

E-mail address *

First name *

Last name *

Company *

Country/Region
United States

Phone
+1 XXX-XXX-XXXX

Department *

Relationship to SAP *

Create password *

Confirm password *

Must have at least 8 characters.

☐ I have read and understood the Terms and Conditions of [SAP.com](#)

SAP will use any of the data provided hereunder in accordance with the [Privacy Statement](#).

This site is protected by reCAPTCHA and the Google [Privacy Policy](#) and [Terms of Service](#) apply.

Submit

3. Go to the mail inbox to activate the account

SAP

CLOUD IDENTITY

Hello [redacted]

An account has been created for you. To activate your account for [Administration Console](#) of SAP Cloud Identity, click the link below. You will be taken to a page where you will also set a password for your account.

Click here to activate

If the link above is not displayed or does not work, copy and paste the link below to the address bar of your browser.

[redacted]

For more information, see [SAP Cloud Identity service documentation](#)

In case of any issues, create a ticket with BC-IAM-IDS component in [SAP Support Portal](#).

4. As shown in [Step 1.2](#), go to the role of 'gtt-sample-integration', and add the following roles:

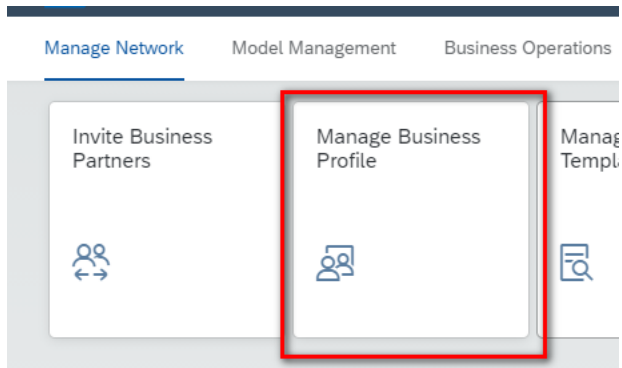

Role	Application
EMIDocIntegrationTemplate	lbn_gtt_core
MetadataServiceIntegrationTemplate	lbn_gtt_core
ReadServiceIntegrationTemplate	lbn_gtt_core
WriteServiceIntegrationTemplate	lbn_gtt_core
LocationProcessTemplate	lbnplatform-loc-broker

5. Grant 'gtt-sample-integration' to your **technical** user:
For example, techuser1@techcompany.com

Users (1)

ID	Identity Provider	E-Mail	First Name	Last Name
[REDACTED]	[REDACTED].com	[REDACTED].com	[REDACTED]	[REDACTED]

6. Go to SAP Fiori Launchpad for the global track and trace option.
Open *Manage Business Profile* app.

7. Add one Alternate Identifier:
Identifier Type: Technical User
ID: the email address of technical user

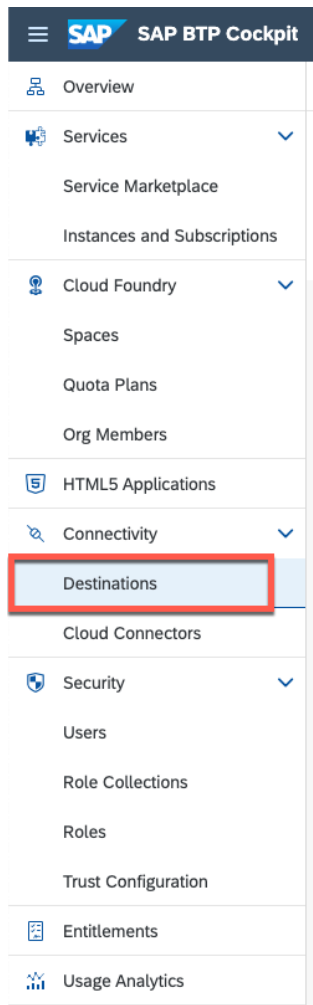

Email	Phone Number
[REDACTED]	[REDACTED]

Alternate Identifiers (1)	
Identifier Type	ID
Technical User	[REDACTED].com

Note: The technical user in this step should be different from the application user in [Step 1.2.4](#).

1.4 Maintain Destination of GTT Core Engine Base URL

1. Go to Destination

2. Configure Destination of GTT Core Engine Base URL

Name	gtt_core_engine_flp_base_url
Type	HTTP
Description	<optional>
URL	e.g. https://lbn-gtt-samples.gtt-flp-lbnplatform-int.cfapps.sap.hana.ondemand.com/api
Proxy Type	Internet
Authentication	BasicAuthentication
User	User from Step 1.3
Password	Password from Step 1.3

2. Implement *Track PO Fulfillment* Template App

2.1 Download Template Code

Go to <https://github.com/SAP-samples/logistics-business-network-gtt-samples>

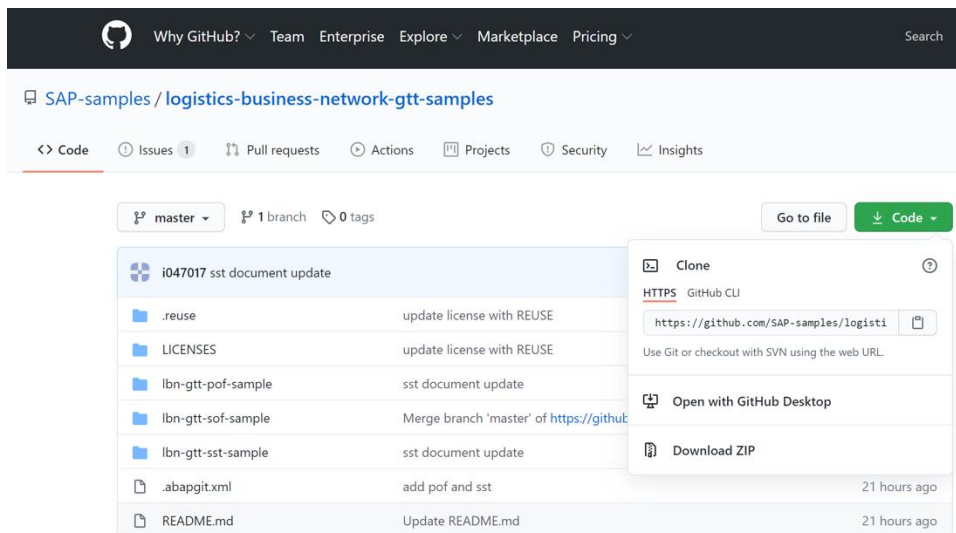

Download ZIP and extract, or git clone the template code from SAP-samples on GitHub.

```
C:\>mkdir dev
```

```
C:\>cd dev
```

```
C:\dev>git clone https://github.com/SAP-samples/logistics-business-network-gtt-samples.git sample
```

Note: make sure the target directory extract or clone is short path.

2.2 Download and Setup Tools

1. Download and Install git

<https://git-scm.com/download/win>

2. Install JDK 8 and Maven

3. Install NPM, Node JS, and grunt-cli

<https://www.saplearners.com/how-to-install-node-js-and-npm/>

Note: Please check versions of node and npm, suggestion to use node version 10.xx.xx

```
C:\dev>node --version
```

```
v10.19.0
```

```
C:\dev>npm -version
```

```
6.13.4
```

4. Install Cloud Foundry Command Line Interface

<https://developers.sap.com/tutorials/cp-cf-download-cli.html>

5. Install MultiApps CF CLI Plugin

<https://github.com/cloudfoundry-incubator/multiapps-cli-plugin>

6. Install Cloud MTA Build Tool (MBT)

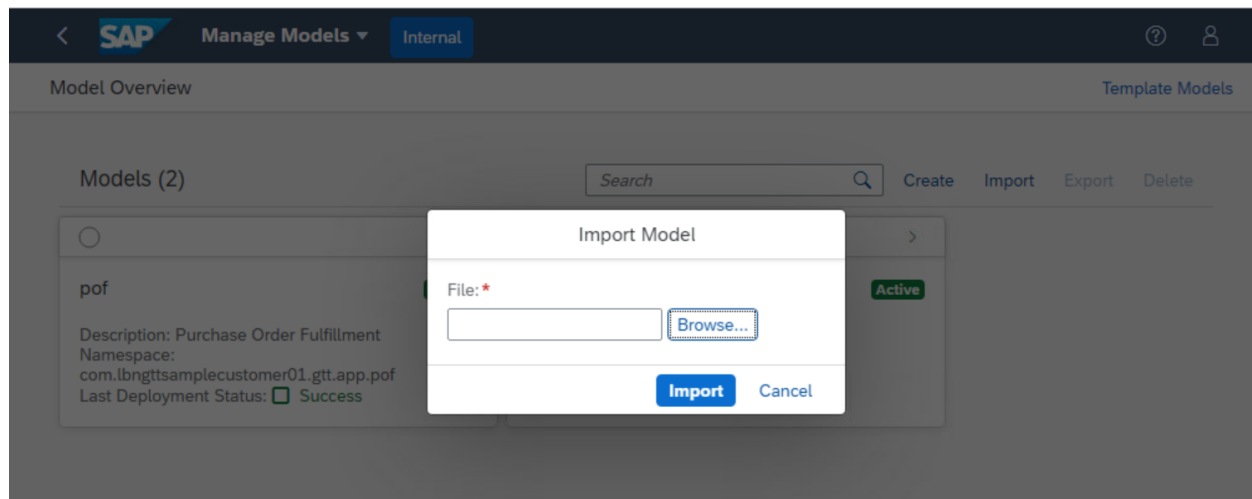

<https://sap.github.io/cloud-mta-build-tool/download/>

7. Install MAKE

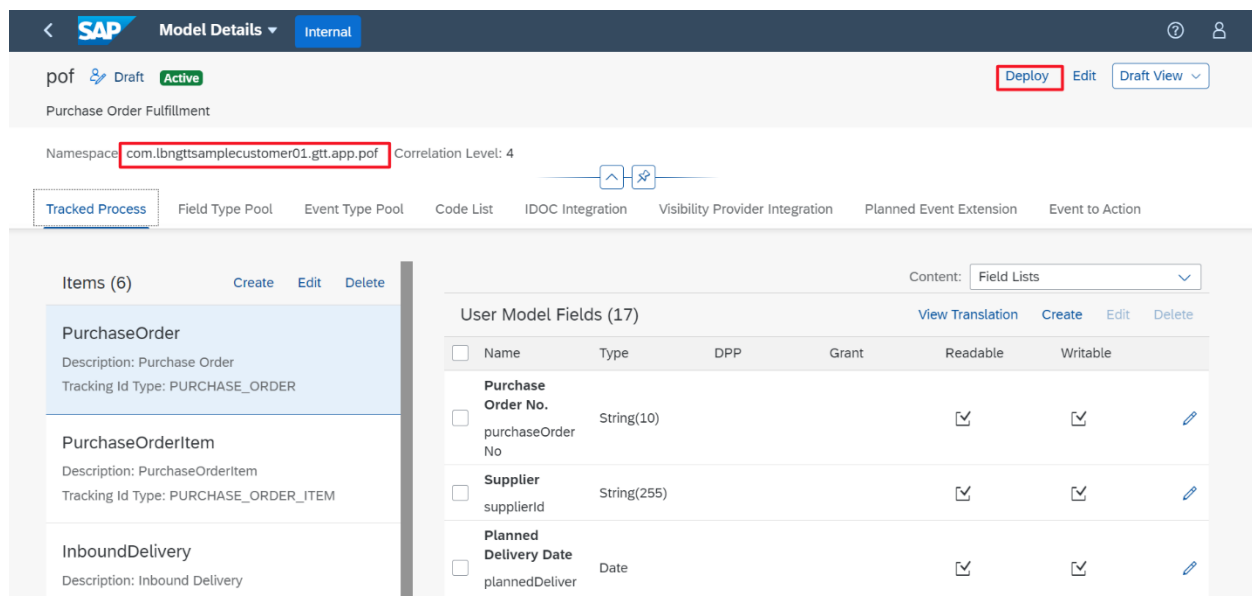

<https://sap.github.io/cloud-mta-build-tool/makefile/>

2.3 Deploy Model

- Go to the folder *model* with downloaded source code. Make sure you have a JSON file *pof-model-YYYYMMDDxx.json* (e.g. *pof-model-2020121901.json*).
- Open *Manage Models* app on SAP Fiori Launchpad for the global track and trace option
- Click 'Import'
- Click 'Browse' to select the *pof-model-YYYYMMDDxx.json* file
- Click 'Import' to import the model

- Click 'Deploy'
- Record the model namespace for later reference, in this case, 'com.lbgnttsamplecustomer01.gtt.app.pof' in the following screenshot:

- Click 'Edit'
- Go to *IDOC Integration* tab

- Replace all the Application Object Type values with the ones you maintained in the ERP system

Tracked Process Mapping

Tracked Process: **PurchaseOrder**

ERP Object Type:

- PurchaseOrder
- PurchaseOrderItem
- InboundDelivery
- InboundDeliveryItem
- Shipment
- Resource

Tracked Process / Events (1)

Name	IDOC	Event Code
PurchaseOrderEvent	E1EHPAO	

Integration Switch: **ON**

Application Object Type: **ZPOF_GTT_IN_HD**

Field	IDOC Segment	IDOC Field
purchaseOrderNo	E1EHPCP	YN_PO_NUMBER
supplierId	E1EHPCP	YN_PO_SUPPLIER_ID
plannedDeliveryDate	E1EHPCP	YN_PO_DELIVERY_DATE
netValue	E1EHPCP	YN_PO_NET_VALUE
currency	E1EHPCP	YN_PO_CURRENCY
incotermsVersion	E1EHPCP	YN_PO_INCOTERMS_VERSION
incoterms	E1EHPCP	YN_PO_INCOTERMS
incotermsLocation	E1EHPCP	YN_PO_INCOTERMS_LOCATION
delayedValue		
receivingLocationId	E1EHPCP	YN_PO_RECEIVING_LOCATION
receivingLocationType	E1EHPCP	YN_PO_RECEIVING_LOC_TYPE
supplierDescription		
supplierLocationType	E1EHPCP	YN_PO_SUPPLIER_LOC_TYPE
receivingLocationDescription		
completionValue		

Save **Cancel**

- Go to *Event to Action* tab
- Replace all the namespace strings, in this case, 'com.lbngttsamplecustomer01.gtt.app.pof' in *Event to Action* script with the model namespace you recorded in the previous step
- Click 'Save' to save the model and then click 'Deploy' to deploy the model

Model Details **Internal**

pof **Draft** **Active**

Purchase Order Fulfillment

```

Save **Cancel**

2.4 Package and Deploy

2.4.1 Login to SAP Cloud Foundry

- Open a command window, *cf login* to SAP Cloud Foundry with your username and password
- Select the organization and space where you want to deploy the template apps

```
MINGW64 [redacted]
Authenticating...
OK
Select an org:
1. [redacted]
2. [redacted]
3. [redacted]
4. [redacted]
5. [redacted]
6. [redacted]
Org (enter to skip): 6
6
Targeted org [redacted]
Select a space:
1. acc
2. perf
3. int
4. inthf
5. sbx
Space (enter to skip): 5
5
Targeted space [redacted]

API endpoint: https://api.cf.sap.hana.ondemand.com (API version: 3.81.0)
User: [redacted]
Org: [redacted]
Space: [redacted]
```

2.4.2 Package and Deploy *Track PO Fulfillment* Frontend App

Go to GTT-V2-Sample-TrackPurchaseOrders-UI directory

- Open the `./UI/.env` file
- Replace `{tenant-name}` with part of the namespace you got from [Step 2.3](#).
For example, replace it with `'lbngttsamplecustomer01'` in `'com.lbngttsamplecustomer01.gtt.app.pof'` shown in [Step 2.3](#).

```
1 TENANT_NAME={tenant-name}
2 UI5_URL=http://localhost:5000/sapui5
3 UI5_DIR=C:\Dev\SAPUI5\1.78.3
4
```

In the command line tool,

- Run the following command to build the MTAR package:

mbt build

A MTAR file `./mta_archives/gtt-v2-ui-sample-track-purchaseorders_xxx.mtar` is then generated.

- To deploy the MTAR package in Cloud Foundry, run the following command:

cf deploy ./mta_archives/gtt-v2-ui-sample-track-purchaseorders_xxx.mtar

The deployment time depends on your network performance.

2.4.3 Package and Deploy SAP Fiori Launchpad for *Template Apps*

Go to GTT-V2-Sample-App-FLP directory.

- Open the `mta.yaml` file
- Replace `{unique-identifier}` with unique information such as your company name or cloud foundry global account name
 - The maximum length of unique information should be no more than 16 characters
 - Must start with alphabetic character
 - No special characters like `-`, `/`, `&`
 - Must in lower case

```

48     parameters:

```

This FLP project includes 3 template applications: Track SO Fulfillment, Track Shipments and Track PO Fulfillment. Before you build and deploy it, please deploy all the UI projects you need in advance. Otherwise, the deployment of this project will fail.

If you only need the Track PO Fulfillment app, make the following changes:

- Open the *mta.yaml* file
- Delete *lbn-gtt-sof-api* and *lbn-gtt-stt-api* in *lbn-gtt-sample-app-appRouter* and *resources* modules
- Delete *gtt-ui-sample-track-salesorders-app-host* and *gtt-ui-sample-track-shipments-app-host* in *flp* and *resources* modules

```

122              "purchaseOrder"
123            ],
124

```

In the command line tool,

- Run the following command to build the MTAR package:

```
mbt build
```

A MTAR file *./mta_archives/lbn-gtt-sample-app-flp_xxx.mtar* is then generated.

- Deploy the MTAR package in Cloud Foundry by running the following command:

```
cf deploy ./mta_archives/lbn-gtt-sample-app-flp_xxx.mtar
```

2.4.4 Package and Deploy Track PO Fulfillment Backend Service

Replace User / Password, Here Map License Key and Host Configuration

- Obtain a Here Map license from [Step 4.1](#)
- Open the file `mta.yaml` under the folder 'GTT-V2-Sample-TrackPurchaseOrders-Service':

```
_schema-version: '3.1'
ID: gtt-v2-sample-track-purchaseorders-service
version: 2.3.0
modules:
- name: gtt-sample-track-purchaseorders-service
  type: java
  path: srv/
  properties:
    SPRING_PROFILES_ACTIVE: cloud
    DESTINATION_GTT: att_core_engine_flp_base_url
    HERE_MAP_KEY: {HERE_MAP_KEY}
  parameters:
    buildpack: java_buildpack
    health-check-timeout: 180
    host: gtt-sample-track-purchaseorders-service-{unique-identifier}
  build-parameters:
    ignore:
      - "*.md"
    build-result: target/*.jar
    timeout: 10m
  requires:
    - name: lbn-gtt-sample-app-uaa
    - name: lbn-gtt-sample-destination
resources:
- name: lbn-gtt-sample-app-uaa
  type: org.cloudfoundry.existing-service
- name: lbn-gtt-sample-destination
  type: org.cloudfoundry.existing-service
```

- Replace {here-map-key} with your license key
- Replace {unique-identifier} with unique information such as your company name or Cloud Foundry global account name
- Open the file `./srv/src/main/java/com/sap/gtt/v2/sample/pof/constant/Constants.java`
 - Replace 'com.lbngttsamples.gtt.app.pof' with the model namespace you got from [Step 2.3](#)

```
package com.sap.gtt.v2.sample.pof.constant;

public class Constants {
    public static final String GTT_MODEL_NAMESPACE = "com.lbngttsamples.gtt.app.pof";
    public static final String GTT_MODEL_NAMESPACE_WRITE_SERVICE = GTT_MODEL_NAMESPACE + ".pofWriteService";
    public static final String MODEL_NAMESPACE = GTT_MODEL_NAMESPACE + ".pofService";
}
```

- Open file `./srv/pom.xml`

Change line 24, 25
from

```
<spring-boot-starter.version>2.4.0</spring-boot-starter.version>
<spring-security.version>5.5.0-M1</spring-security.version>
```

to

```
<spring-boot-starter.version>2.4.3</spring-boot-starter.version>  
<spring-security.version>5.5.0</spring-security.version>
```

- Run the following command to build the MTAR package:

```
mbt build
```

A MTAR file *./mta_archives/gtt-v2-sample-track-purchaseorders-service_xxx.mtar* is then generated.

- Deploy the MTAR package in Cloud Foundry by running the following command:

```
cf deploy ./mta_archives/gtt-v2-sample-track-purchaseorders-service_xxx.mtar
```

2.4.5 Check Deployed Apps on SAP Cloud Foundry Cockpit

After operations from [Step 2.4.1](#) to Step 2.4.3, check the deployed apps on SAP Business Technology Platform Cockpit.

The screenshot shows the SAP BTP Cockpit interface. The left sidebar contains navigation links: Applications, Services, SAP HANA Cloud, SAP HANA Cloud Migrations, SAP HANA, Portal, Routes, Security Groups, Events, and Members. The main area displays the 'Applications' tab for the 'Applications' space. A table lists the deployed applications with their requested states and names.

Requested State	Name
Stopped	flp-green
Started	gtt-sample-track-purchaseorders-service-blue
Started	gtt-sample-track-salesorders-service-green
Started	gtt-sample-track-shipments-service-blue

2.4.6 Maintain Destination of Forwarding URL

1. Obtain the UAA Token
 - Go to the *Track PO Fulfillment* backend application that you have deployed

The screenshot shows the details of the 'gtt-sample-track-purchaseorders-service' application. It displays a 'Started' status, version '1/1', and memory usage of '1024 MB'. There are also icons for play, refresh, and delete.

- Find the environment of UAA

- Copy the value of **clientid** and **clientsecret**

The screenshot shows the SAP BTP Cockpit interface. The left sidebar contains navigation options: Overview, Service Bindings, Security, Roles, Scopes, Attributes, Role Templates, User-Provided Variables, Environment Variables, Events, and Logs. The main area displays 'Application: gtt-sample-track-purchaseorders-service-blue - Service Bindings'. A table lists two bindings:

Name	Service	Plan	Actions
lbn-gtt-sample-app-uaa	xsuaa	application	[Icons]
lbn-gtt-sample-destination	destination	lite	[Icons]

Below the table is a 'Hide sensitive data' button and a JSON configuration for the selected binding. The 'clientid' and 'clientsecret' fields are highlighted with red boxes:

```
{
  "tenantmode": "dedicated",
  "sburl": "https://internal-xsuaa.authentication.sap.hana.ondemand.com",
  "subaccountid": "...",
  "credential-type": "instance-secret",
  "clientid": "...",
  "xsappname": "tt_sot_acct112255",
  "clientsecret": "...",
  "url": "https://lbn-gtt-samples.authentication.sap.hana.ondemand.com",
  "uaadomain": "authentication.sap.hana.ondemand.com",
  "verificationkey": "-----BEGIN PUBLIC KEY-----",
  "apiurl": "https://api.authentication.sap.hana.ondemand.com",
  "identityzone": "lbn-gtt-samples",
  "identityzoneid": "...",
  "tenantid": "...",
  "zoneid": "..."
}
```

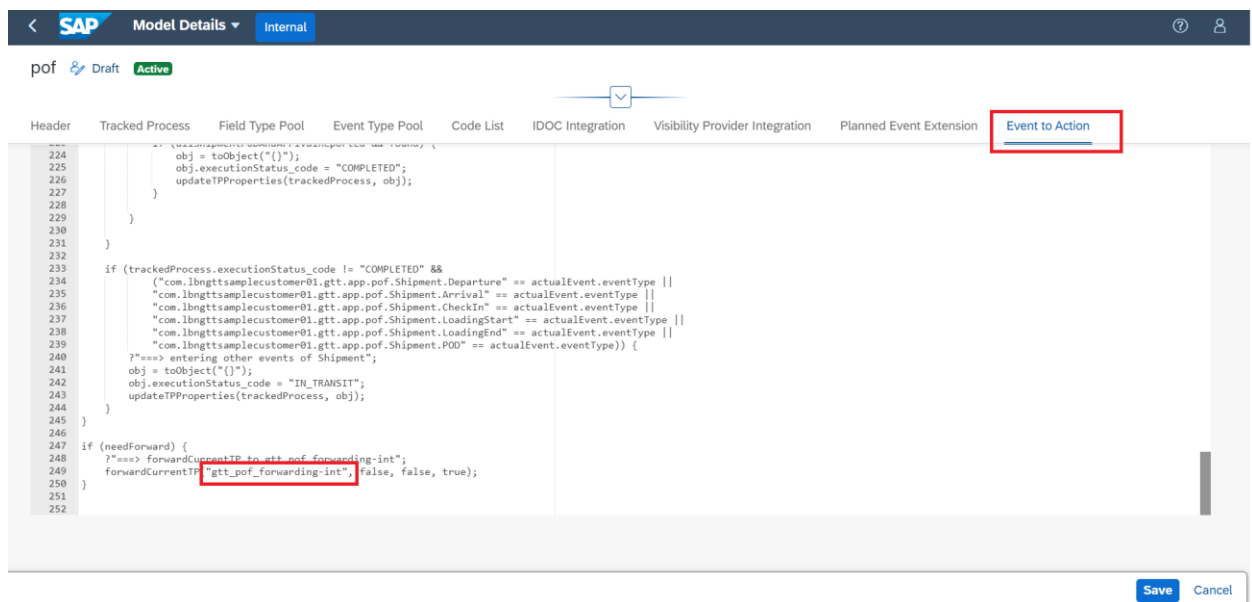

2. Go to 'Destinations'

The screenshot shows the SAP BTP Cockpit interface with the left sidebar expanded. The 'Destinations' menu item is highlighted with a red box. The sidebar contains the following items: Overview, Services (with a dropdown arrow), Cloud Foundry (with a right arrow), HTML5 Applications, Connectivity (with a dropdown arrow), Destinations (highlighted), Security (with a dropdown arrow), Entitlements, and Usage Analytics.

3. Configure Destination of Event to Action Forwarding

Name	e.g. gtt_pof_forwarding_int
Type	HTTP
Description	<optional>
URL	e.g. https://gtt-sample-track-purchaseorders-service.cfapps.eu10.hana.ondemand.com/sap/logistics/gtt/sample/pof/rest/v1/forward
Proxy Type	Internet
Authentication	OAuth2ClientCredentials
Client ID	Copied in the previous step
Client Secret	Copied in the previous step
Token Service URL	e.g. https://lbn-gtt-samples.authentication.eu10.hana.ondemand.com/oauth/token

Note: You need to update the destination name in *Event to Action* script of *Track PO Fulfillment* model if you change the name from 'gtt_pof_forwarding_int' to others.

2.4.7 Maintain Roles and Users

- As shown in [Step 1.2](#), go to the role of 'gtt-sample-all', and add the following role:

Role	Application
PurchaseOrderFulfillmentAppUserDisplayTemplate	tt_pof_{space}

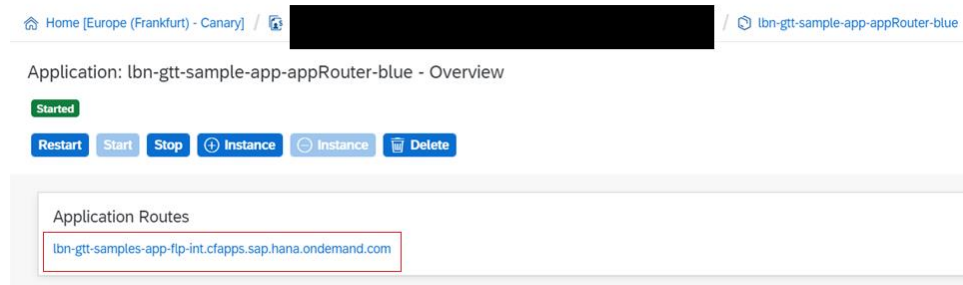

Note that the role of 'PurchaseOrderFulfillmentAppUser' is used to access the *Track PO Fulfillment* app.

If you need to access other template applications such as *Track Shipments* or *Track SO Fulfillment*, add the following roles:

Role	Application
StandaloneShipmentTrackingAppUserDisplayTemplate	tt_sst_{space}
StandaloneShipmentTrackingAppUserProcessTemplate	tt_sof_{space}
SalesOrderFulfillmentAppUserDisplayTemplate	tt_sof_{space}

2.4.8 Open *Track PO Fulfillment* Template App from SAP Fiori Launchpad

- Obtain the Application Routes from SAP Cloud Foundry Cockpit

- Click the link of Application Routes
The system browser then navigates to the SAP Fiori Launchpad of *Track PO Fulfillment*

- Open the *Track PO Fulfillment* template app

Purchase Orders (2)

Purchase Order No.	Supplier	Receiving Location	Planned Delivery Date	Net Value	Completion Rate	Incoterms
9900029829	VEN_CO	0001	Oct 19, 2020	110000.00 INR	0.00 %	Costs and freight
9900066187	VEN_CO	0001	Oct 19, 2020	110000.00 INR	72.00 %	Costs and freight

3. Implement ERP Extractor

For ERP extractor implementation, refer to the following document:

02_Extractor_Creation_Guide-TPOF.pdf

4. Other Configuration

4.1 Obtain A Here Map License

To have the map view, log the incident with the URL of Fiori Launchpad of template apps in SAP BCP system under component 'SCM-LBN-GTT-APP'. Then follow the SAP Note 1773689: <https://launchpad.support.sap.com/#/notes/0001773689> to add logon credentials to the secure area so that we can provide you with the key in a safe way. After you get the key, you can use it in [Step 2.4.4](#) when deploying the backend service.

For quick validation, you can also use the tile service of other map services.

4.2 Maintain Location Master

To show stops and planned events in the map, you need to maintain location master data with valid geocoordinates in the *Manage Locations* app.

1. Open the *Manage Locations* app in your SAP Fiori Launchpad for the global track and trace option

2. Click 'Create' to create a new location

The screenshot shows the SAP S/4HANA 'Locations' table. At the top, there are filters for Location ID, Object Type, Description, Country/Region, and City. Below the filters, the table lists two locations. The 'Create' button is highlighted with a red box in the top right corner of the table area.

Location ID	Description	Object Type	Country/Region	State	City	District	Street	House Number
QM7CLNT910:NL-HARBOR	NL Harbor	Logistic Location	Netherlands (the)		Leiden			
Changed On: Sep 8, 2020, 5:30:41 PM External ID: NL-HARBOR Source System: QM7CLNT910								
QM7CLNT910:MX91	CATT VZ MX91	Supplier	Germany		Herten			
Changed On: Sep 8, 2020, 5:29:24 PM External ID: MX91 Source System: QM7CLNT910								

3. Maintain location information with valid geocoordinates

To integrate with ERP, you need to keep the Object Type, Source System, and External ID location consistent with ERP location information.

For details, refer to the following document:

02_Extractor_Creation_Guide-TPOF.pdf

The screenshot shows the 'Create Location' form in SAP S/4HANA. The form has two tabs: 'GENERAL' and 'ALTERNATIVE LOCATION IDS'. The 'GENERAL' tab is active. The form contains various input fields for location information. The 'Longitude' and 'Latitude' fields are highlighted with a red box, showing the format for entering coordinates (e.g., 'Example: 000.00000000').

Object Type: *
Logistic Location

Source System/External ID: *
Source System: External ID

Description: *

Time Zone:

Longitude: * (East) Example: 000.00000000

Latitude: * (North) Example: 00.00000000

Country/Region:

State:

City:

District:

Street/House Number:

Zip Code:

4.3 Maintain Data Contributors

To receive actual events from other business partners, you need to invite them to join your business network. For more, search for *Administration Guide for Version 2* at help.sap.com/gtt and see the chapter 'Onboarding and User Management (Data Contributors)'.
