**What's New in the Track PO Fulfillment Template App 2103 Micro Release**

In the 2103 Micro Release, the following feature enhancements are delivered as below:
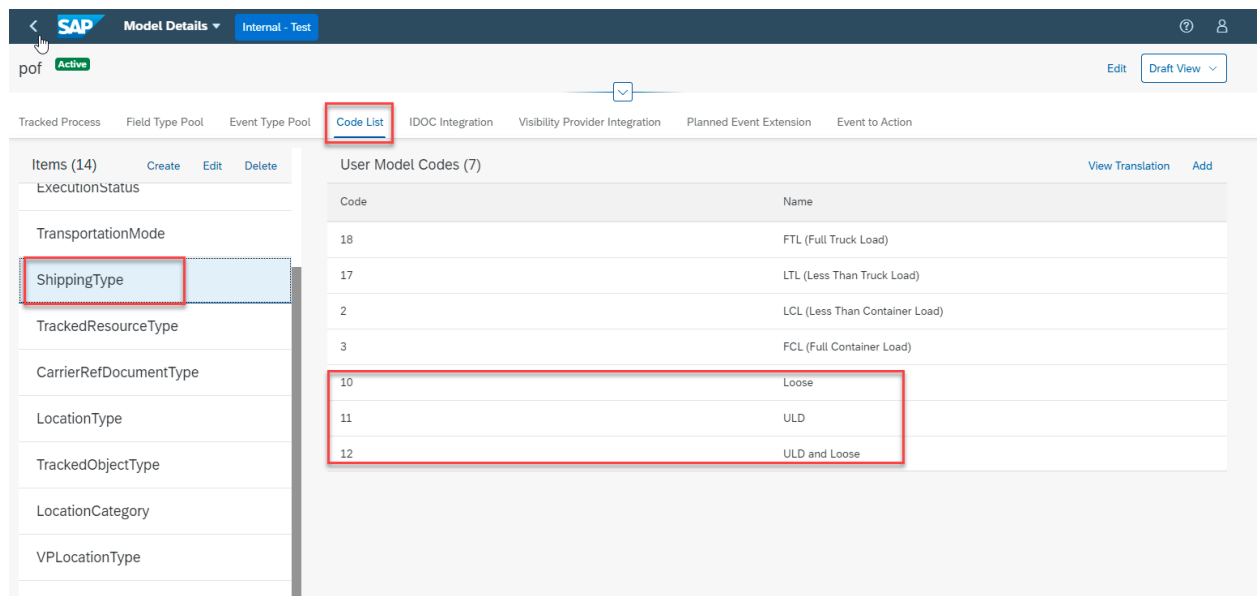

1. **Enable the Air Tracking Mode with Integration with Visibility Providers**
   To enable the Air Tracking mode, the following model definitions have been added and the relevant ERP extractor codes have been adapted accordingly.

Transportation Means Standard Code	
❯ Transportation Means Tracked Objects	trackedObjects

Meanwhile, for each shipment event, the United Nations Code and IATA Code are added for integration with the visibility provider. See the example below:

2. Enable Quick Refresh Feature in Delivery Item Page

The Quick Refresh feature refreshes the page without the layout reloading. This makes the performance better than the browser refreshing. Press the button on the top right for a quick refresh.

3. Enhance the Calculation Part

Filtering by Delay Status has been enabled. Meanwhile, some important visibility fields such as 'Delay Impact', 'Completed and Late Value', 'Revised / Initial Planned Delivery Date', 'Planned vs Actual Arrival Time' have been added. See examples below:
